                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 34213, Application US/09270767

Sequence 34213, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster;

FILE REFRENCE: File Reference: 7326-094

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

NUMBER OF SEQ ID NOS: 62517

SEQ ID NO 34213

LENGTH: 806

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 2, Application US/08242677
Patent No. 5677143
GENERAL INFORMATION:
APPLICANT: Gaynor, Richard B
APPLICANT: Wi. FOOM W
TITLE OF INVENTION: Cellular Nucleic Acid Binding Protein
TITLE OF INVENTION: and Uses Thereof in regulating Gene Expression and in the TITLE OF INVENTION: Treatment of AIDS
NUMBER OF SEQUENCES: 9
CORRESPONDENCE ADDRESS:
                                                                      ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

3 Sequence 56266, Application US/09270767

3 EXERGIBERE INCEMPATION:

APPLICANT: Homburger et al.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster.

TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster.

CURRENT APPLICATION NUMBER: US/09/270,767

CURRENT FILING DATE: 1999-03-17

CURRENT FILING DATE: 1999-03-17

NUMBER: Patentin Ver. 2.0

SEQ ID NO 56266

LENGTH: 233

TYPE: PRT

CORGANISM: Drosophila melanogaster

PEATURE:

CORGANISM: Drosophila melanogaster

CORGANISM: OFFER INFORMATION: Xaa means any amino acid

Cyammer---ryocattm: tau

Cyammer---ryocattm: norvegicus (Norway rat)

Cyaccession: 183432

Ryben Dunnen, J.T.; van Neck, J.W.; Cremers, F.P.M.; Lubsen, N.H.; Schoenmakers, J.G.G.

Ryben 78, 201-213, 1989

A;Title: Nucleotide sequence of the rat gamma-crystallin gene region and comparison with A;Reference number: 160312; MUID:89378747; PMID:2777080

A;Accession: 183432

A;Status: preliminary; translated from GB/EMBL/DDBJ

A;Molecule type: DNA

A;Residues: 1-174 <RES>
A;Cross-references: UNIPROT:P02529; GB:M19359; NID:g203626; PIDN:AAA40983.1; PID:g203629

C;Genetics: A;Gene: CRY-gamma-C

A;Introns: 3/3; 84/3

C;Superfamily: beta-crystallin

C;Keywords: duplication
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Aging blookynthesis protein, RfbU family [imported] - Clostridium acetobutylicum C; Bobosynthesis protein, RfbU family [imported] - Clostridium acetobutylicum C; Species: Cloatridium acetobutylicum cypecies: Cloatridium acetobutylicum cype: Brook C; Date: 14-Sep-2001 #text_change 09-Jul-2004 C; Date: 14-Sep-2001 #text_change 09-Jul-2004 C; Date: A; Daty, M.J.; Berton, G.; Omelchenko, M.V.; Markarova, K.S.; Zeng, Q.; Gibson, R.; Lee, J.; Daly, M.J.; Bennett, G.N.; Koonin, E.V.; Smith, D.R. Sequence 19827, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: ABRUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR PELING DATE: 1999-02-18
PRIOR PELING DATE: 1999-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ï

Sequence 14974, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:
APPLICANT: Keith Weinstock et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAN

TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS

TITLE OF INVENTION: NUMBER: US/09/248,796A

CURRENT APPLICATION NUMBER: US 60/074,725

PRIOR FILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-08-13

PRIOR FILING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 586, Application US/09673395A

Patent No. 6620923

i Sequence 5458, Application US/09134000C

i Patent No. 6617156

i GENERAL INFORMATION:

i APPLICANT Lynn Doucette-Stamm et al

i TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO

i TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO

i TITLE OF INVENTION: ENTERCOCCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS

i CURRENT APPLICATION NUMBER: US/09/134,000C

i CURRENT FILING DATE: 1996-08-13

i PRIOR FILING DATE: 1997-08-15

i NUMBER OF SEQ ID NOS: 6812

i SOFTWARE: Patentin version 3.1

i SEQ ID NO 5458

PIR 79:* 1: pir1:* 2: pir2:* 3: pir3:* 4: pir4:*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Description
